

IN THE SPECIFICATION

Please amend the paragraph at page 30, lines 13-22, as follows:

Also, it is possible to suppress the interferences by controlling the antenna directivity 22a-c, 24 (see Figures 14 and 18) of the antenna so that it is possible to improve the communication quality. It is also possible to shorten the switching time necessary for the antenna control by allocating the consecutive communication bandwidths in the same frame with respect to the radio terminals for which the antenna directivity is similar. In addition, it is also possible to allocate the communication bandwidths efficiently so that the frequency utilization efficiency can be improved.
